## VA Commits \$17 Million to Expand Intimate Partner Violence Assistance Program

### Services address healing from physical, psychological and social effects of violence.

WASHINGTON — The U.S Department of Veterans Affairs (VA) is taking action to address Intimate Partner Violence (IPV) by earmarking \$17 million in funds to support Veterans in need.

The funds will strengthen IPV Assistance Programs in VA facilities nationwide.

“VA recognizes that intimate partner violence is a health issue faced by many Veterans and their families,” said Acting VA Secretary Peter O’Rourke. “We are giving careful attention to this program, ensuring it is integrated into clinical care and workplace safety. Both are important to the safety of Veterans and VA employees who report experiencing violence.”

IPV affects millions of Americans. The term “intimate partner violence” describes physical, sexual or psychological harm by a current or former partner or spouse. This type of violence can occur among heterosexual or same-sex couples.

Awareness and identification of intimate partner violence among Veterans has increased. Research suggests Veterans may be at greater risk than their civilian counterparts, given the unique stressors posed by military life.

VA’s IPV Assistance Program focuses on the individual and works on developing a culture of safety. This holistic approach involves understanding, recognizing and responding to the effects of all types of trauma. The ultimate goals are to end violence, prevent further violence and promote healthy relationships.

The Veterans Health Administration launched the IPV Assistance Program in January 2014 and has since established IPV Assistance Program Coordinators at more than 115 VA facilities to offer assistance to Veterans, their partners and VA staff. Program Coordinators use resources from mental health, primary care, women’s health, Veterans justice outreach and employee occupational health and assistance programs.

The IPV program also offers intervention through VA and community partnerships that address housing, education and employment needs. This additional funding will allow VA to expand the program to all VA medical centers and build greater awareness of IPV as a serious health issue.

## California Bullet Train Has Created Over 2,000 Construction Jobs

In a June 2018 update on the \$77 billion bullet train, the California High Speed Rail Authority reported that the project has created more than 2,000 construction jobs since 2013.

Crews, according to the authority, have been relocating utilities, demolishing buildings, drilling columns and installing girders. Rail officials said that, as the project expands to the north and south of completed work, it will create thousands of additional construction positions. To date, 21 union halls are represented on the project.

There are active high-speed rail construction sites, according to the most recent authority business plan, along a 119-mile path through the state’s Central Valley area. The authority said this activity has spurred \$5 billion to \$6 billion of economic activity and created additional work for environmental engineers, planners and designers, including small businesses and companies owned by disabled veterans.

The authority painted a picture of the rail as a project with momentum and a source of jobs for years to come in its construction update, but frustrated taxpayers could chart a different course for the bullet train. The results of a poll conducted by the University of Southern California and the Los Angeles Times revealed that only 31% of state voters would favor putting additional state money toward the bullet train, with 49% responding that they would stop construction altogether.

As part of its 2018 business plan, rail officials put a new price tag to the project — \$77 billion, which is nearly double what the projected costs were when voters approved a finance deal for a portion of the bullet train through \$10 billion in bond sales. That bottom line, however, assumes a funding source for the rest of the project, which the authority does not have as of yet, and the ability of crews to overcome logistical hurdles like digging through a series of mountain ranges north of Los Angeles on a schedule significantly short of that task’s estimated 30-year-plus time range. Right now, the authority is projecting a cost of \$98 billion to complete the entire route from the San Francisco Bay area to Anaheim, California, but that could increase if the project encounters additional obstacles.

Despite the rail’s problems, authority officials in April requested long-term funding through a 20-year extension of the state’s greenhouse gas cap-and-trade program, which helps fund the bullet train. Even so, that would not meet the rail’s capital needs since the authority only has 30% of the money it needs to finish the project.
